COMMON FEATURES

RELAXED TOPS = BETTER CIRCULATION

Our entire specialised range incorporates a "Relaxed Top" design to ensure the body of the sock hugs your lower leg to keep the sock up and also maintains unrestricted circulation.

NATURAL FIBRES = NO IRRITATION

We use natural fibres in all our socks to help keep your feet healthier. Natural fibres have the ability to absorb and remove moisture providing a drier environment for your feet, which reduces the chance of fungal or bacterial infection developing.

OPEN WEAVE = BETTER VENTILATION

Our open weave construction allows the fibres to stretch and move in multiple directions providing a snug fit around your feet - just like a second skin. This means there is no unnecessary wrinkling or bunching which promotes greater air circulation and a much healthier environment for your feet.
