

Diabetic Socks

Relaxed Tops = Better Circulation

Our specialised 'Relaxed Top' design ensures the body of the sock hugs your lower leg to keep the sock up and also maintains unrestricted circulation.

Open Weave = Better Ventilation

This feature allows the fibre to stretch and move in multiple directions providing a snug fit around your feet – just like a second skin. This means no unnecessary wrinkling or bunching which promotes greater air circulation and a much healthier environment for your feet.

+ Enhanced Features in our 2 for \$10 range

Cushion Sole = Added Comfort

All our cushioned soles are designed to effectively protect your feet, fit well with durability. We achieve this by incorporating our cushioned weave into the areas that are subjected to the largest amount of pressure and wear – the end result is a sock that provides all day comfort.

Extra Fine = Silky, Light-Weight feel

Designed for a sheer, feather-light fit with a feeling of luxurious softness. We achieve this by combining a tighter than average weaving pattern and a higher proportion of cotton fibres than standard socks.

Ideal for Boots = Thick & Hard Wearing

Our outdoor range have been specially designed to look after your feet and provide the ultimate level of comfort all-day long in hot, cold or normal conditions. These socks are ideal for those who want extra thickness and protection during activities such as bushwalking, trekking or while wearing work boots.

Natural Fibres = No irritation

We use natural fibres in all our socks to help keep your feet healthier. Natural fibres have the ability to absorb and remove moisture providing a drier environment for your feet, which reduces the chance of fungal or bacterial infection developing.

Extra Large = Longer & Wider Comfort

Our Extra Large fitting socks have been designed for those who require additional length and width without comprising on comfort or durability. Our special weave allows the sock to stretch in multiple directions ensuring the right parts of the sock are where they are supposed to be when they are being worn.

Bamboo Fibres = Odour Absorbing

We have introduced Bamboo fibres into our weave because of its natural antibacterial and hypoallergenic qualities, as well as its ability to absorb moisture. The inclusion of bamboo helps to absorb odours and moisture ensuring your feet stay drier and more comfortable.

Seamless Toe = Better Fit

We incorporated a seamless toe into our design to reduce the possibility of rubbing and irritation, which can cause blisters and unnecessary soreness. No bulky seam means a much more comfortable fitting sock.
